

ESST Proceedings

Reims 2015

Nitrite in Animal Feed General Sugar Technology Environmental Technologies Crystallization

S. Frenzel

Update on nitrite in animal feed – Results of the studies of the ESST-working group 'Nitrite in feed'

A. Bagherzadeh, U. Freiblich, Q. Smejkal, Th. Frankenfeld

Optimization of heat economy by sugar production in the Aarberg sugar factory

Th. Schulze, A. Lehnberger, J. Pfauntsch, Th. Frankenfeld

A look at technological and technical tower extraction trends

F. Majchrzak

Crystallization with feed syrups of high dry substance content

A.S. Jensen, B. Morin

Energy and the environment in beet sugar production

S.M. Stauffer

Operational experience with the new generation of low temperature belt dryers for sugar beet pulp

G. Caspers, K. Nammert, H. Fersterra, H. Hafemann

Environmental technology: Fluidised-bed steam dryers – latest developments and practical experience

M. Wojtczak, R. Gruska, P. Mikos, A. Antczak-Chrobot

Dextran molecular mass effect on particle size distribution of CaCO₃ for 1st and 2nd carbonatation

A.G. Degenhardt

Authenticity of sugar – Identification of plant source and determination of geographical origin of sucrose

R. Aubry, L. Gasnot

The fate of formaldehyde in sugar manufacture and in products

W. Hein, F. Emerstorfer

Technological beet quality: Alternative predictive model by utilizing the dry substance of beet brei filtrate

A. Wittenberg, M. Roukema, J. Struijs, O. van Baal

Sustainable approach towards the new EU-Sugar Market era

T.I.M. Grootsholten, P. Gulden, V. Hoffmann, J.F.M. Raap

Suiker Unie perspective on reducing odour emissions in the wash water-circuits of sugar factories

H.-J. Jördening, R.-M. Schoth, Ch. Pipper, R. Egholm

New method for enhanced reactivation of anaerobic plants

K. Schlumbach, M. Scharfe, E. Flöter

Color transfer into sucrose crystallized from blended beet and cane syrups

M. Bruhns

Considerations about mass and energy flow in discontinuous evaporating crystallizers

K. Abraham, S. Hagen, K. Schlumbach, E. Flöter

Enzymatic decomposition of dextran in sucrose solutions

M.A. Théoleyre, A. Gonin, D. Paillat

Innovative concepts of regeneration of decolorization ion exchange resins in sugar refineries

R. Delecourt, L. Marsal

Development of PEF extraction technology by Maguin

D. Seebaum, S. Weidner

Control system for optimization of productivity and energy demand of batch type centrifugals

L.W. Weiss

Process modeling using Sugars™ – Beet factory

B. Gaillac, C. Rua

On-line crystal growth monitoring and sugar color measurement using image processing techniques

J.M. Chauwin, B. Launay, E. van Haute

The use of monochloramine to replace formaldehyde in the sugar beet process (extraction)

A. Mesmacque

Falling film evaporators in beet and cane sugar industry

M. Wojtczak, A. Antczak-Chrobot, P. Mikos, M. Molska, I. Błaszczyk, A. Papiewska

Changes in the content of organic acids and inorganic anions in sugar beet during long-term storage

G. Eggleston, I. Lima, E. Sarir, J. Thompson, J. Zatlöková, E. St. Cyr

Use of activated carbon to remove undesirable residual amylase from refinery streams

J.P. Jensen, H. Nurmi, M. Muntola, I. Weiergang

Experiences with glucose determination in Finnish beet

282 Pages, 27 contributions plus 10 abstracts,

18 Tables, 114 Figures

Size 15.8 x 24 cm. ISBN 978-3-87040-165-8

Price : €119 (+ VAT, where applicable)
