Foreword	5	1.1.5.6	Intense sweeteners	51
Preface	7	1.1.5.7	Synergistic effects of blends	52
About the Editors	9	1.1.6	Total sweetener consumption and outlook	52
List of symbols	25	1.2	Sugar – Ingredient for the household and the food industry	53
List of subscripts	29	1.2.1	Emotional and psychological relationships	53
List of contributors	32	1.2.2	Sugar and nutrition	53
		1.2.3	Health aspects of sugar	55
		1.2.4	Theory of sweetness	57
		1.2.5	Sensory properties, molecular structure and relative sweetness	58
1 Sugar	37	1.2.6	Sugar in the sweetener market	60
1.1 Historical overview of sweeteners	37	1.2.6.1	Functional properties	60
1.1.1 Honey and fruit juice concentrates	37	1.2.6.2	Competitive sweeteners	60
1.1.2 Sugar crops	38	1.3	Sugar – raw material for the chemical and fermentation industry	63
1.1.2.1 Sugarcane	38	1.3.1	Oxidation	63
1.1.2.2 Sugar palm, sweet corn, sugar maple	40	1.3.2	Hydrogenation/reductive amination	65
1.1.2.3 Sugarbeet	40	1.3.3	HMF production	67
1.1.3 Sugar production	41	1.3.4	Sucrose-based esters	67
1.1.3.1 Preindustrial cane sugar production	41	1.3.5	Polyurethane	68
1.1.3.2 Early beet sugar production	42	1.3.6	Fermentation	68
1.1.3.3 Changes in sugar production and trade in the 19 th century	42	1.3.7	Separation of invert sugar into glucose and fructose	69
1.1.3.4 Advances in sugar technology	43	1.3.8	Sugar as a timber preservative	69
1.1.4 Sugar in the world economy	45	1.4	Physicochemical properties of sucrose	70
1.1.4.1 Development of the sugar industry in the 20 th century	45	1.4.1	Chemical structure and conformation	70
1.1.4.2 Changes in sugar consumption	46	1.4.2	States of matter of sucrose	70
1.1.4.3 Importance of by-products	47	1.4.2.1	Crystalline phase	70
1.1.4.4 Sugar as a renewable resource: Sugar in the chemical industry	48	1.4.2.2	Amorphous sugar	71
1.1.5 Other sweeteners	48	1.4.3	Properties of crystalline sucrose	72
1.1.5.1 Starch sugars	48	1.4.4	Properties of granulated sugar in bulk form	74
1.1.5.2 Fructose	49	1.4.5	Properties of sucrose solutions	75
1.1.5.3 Lactose, lactose hydrolysates	50	1.4.5.1	Theory of sucrose in solution	75
1.1.5.4 Sugar alcohols (polyols)	50	1.4.5.2	Structurally determined properties	76
1.1.5.5 Diabetic sweeteners	51	1.4.5.3	Optical and magnetic properties	81

1.4.5.4	Thermodynamic properties of sucrose solutions	83	2.1.3.2.3	Hemicelluloses	122
1.5	Quality criteria of white sugar and its commercial grades	84	2.1.3.2.4	Lignin	123
1.5.1	Limiting values in international standards	84	2.1.4	Composition of cell juice	123
1.5.1.1	Codex Alimentarius	84	2.1.4.1	Nitrogen-free compounds	123
1.5.1.2	EU sugar standards	86	2.1.4.1.1	Monosaccharides	123
1.5.1.3	Standards of the EU sugar market regime	87	2.1.4.1.2	Oligosaccharides	126
1.5.1.4	US Food Chemical Codex	88	2.1.4.1.3	Polysaccharides	128
1.5.1.5	Other standards and guidelines	89	2.1.4.1.4	Organic and inorganic anions	129
1.5.2	Individual criteria in international standards	90	2.1.4.1.5	Inorganic cations and ash	133
1.5.2.1	Sucrose	90	2.1.4.1.6	Saponins	135
1.5.2.2	Invert sugar	90	2.1.4.1.7	Lipids	137
1.5.2.3	Ash and conductivity	91	2.1.4.1.8	Odor substances	137
1.5.2.4	Water	91	2.1.4.2	Nitrogenous compounds	138
1.5.2.5	Color and turbidity of the solution	93	2.1.4.2.1	Overview	138
1.5.2.6	Visual appearance (color type)	95	2.1.4.2.2	Amino acids and amides	140
1.5.2.7	Sulfur dioxide	95	2.1.4.2.3	Proteinaceous substances	144
1.5.2.8	Contaminants	96	2.1.4.2.4	Plant bases and lecithin	146
1.5.2.9	Raffinose and theandrose in white sugar	97	2.1.4.2.5	Nucleic acids, pyrimidine and purine bases, allantoin	148
1.5.3	International Pharmacopoeia	97	2.1.4.2.6	Phenolic compounds	150
1.5.3.1	European Pharmacopoeia	97	2.1.4.2.7	Vitamins	151
1.5.3.2	United States Pharmacopoeia	98	2.2	Composition of sugarcane	151
1.5.4	Specific criteria	98	2.2.1	Composition of sugarcane fiber and bagasse	151
1.5.4.1	Microbiological criteria and standards	98	2.2.2	Composition of sugarcane juice	152
1.5.4.2	Physical and chemical criteria	98	2.3	Reactions of beet cell-wall constituents	157
1.5.4.3	Crystal properties	104	2.3.1	During storage	157
			2.3.2	During extraction	158
			2.3.3	During ensiling of pressed pulp	161
			2.3.4	Chemical reaction of fine pulp in juice purification	162
			2.4	Reactions of juice constituents	163
			2.4.1	Saccharides	163
			2.4.1.1	Sucrose	163
			2.4.1.2	Enzymatic and microbial reactions related to sucrose	167
			2.4.1.3	Glucose, fructose (invert sugar) degradation	170
			2.4.1.4	Further saccharides	177
			2.4.2	Nonsugars	179
			2.4.2.1	Organic N-free acids	179
			2.4.2.2	Amino acids	181
			2.4.2.3	Glutamine degradation	183
			2.4.2.4	Other nitrogenous substances	185
			2.4.2.5	Phenolic compounds	186
			2.4.2.6	Other constituents	186
			2.4.2.7	Protein, nucleic acids and nucleic building blocks	187
2	Composition of sugarbeet and sugarcane and chemical behavior of constituents in processing	115			
2.1	Composition of sugarbeet	115			
2.1.1	Overview	115			
2.1.2	Relative distribution of beet constituents	115			
2.1.3	Composition of the cell wall	117			
2.1.3.1	Marc, marc hydrate, and juice content	117			
2.1.3.2	Composition of the marc and properties of marc components	118			
2.1.3.2.1	Cellulose	118			
2.1.3.2.2	Pectic substances	119			

2.4.2.8	Inorganic anions	188	4.2.1	Implementing a mechanized harvesting system	245
2.4.2.9	Inorganic cations	189	4.2.3	Fully mechanized whole-stick harvesting systems	245
2.4.3	Color formation	189	4.2.4	Chopper harvesting systems	246
2.4.3.1	Melanin formation	189	4.2.5	Choice between chopper and whole-stick harvester	246
2.4.3.2	Melanoidin formation (<i>Maillard</i> reaction)	192	4.3	Cane loading	246
2.4.3.3	Caramelization	197	4.4	Cane transport	248
2.4.3.4	Strecker degradation	199	4.4.1	Soil compaction	249
2.4.3.5	Inhibitors	200			
3	Quality of sugarbeet and sugarcane	209	5	Reception, storage and washing	251
3.1	Morphology and physical properties of sugarbeet	209	5.1	Determination of beet payment parameters	251
3.1.1	Morphology	209	5.1.1	Weighing and sampling	251
3.1.2	Ultrastructure of the native sugarbeet root	211	5.1.1.1	Weighing	251
3.1.3	Physical properties of beet	212	5.1.1.2	Sampling	253
3.1.4	Physical data of sugarbeet piles	214	5.1.1.3	Top and soil tare determination	253
3.1.5	Physical properties of beet after denaturation	215	5.1.2	Analysis	254
3.2	Formulas to calculate sugar losses in molasses, nonsugar content in thick juice and resulting pH value (alkalinity) of thick juice from beet analysis	216	5.1.2.1	Brei preparation	254
3.3	Structure, propagation and physiology of the sugarcane plant	225	5.1.2.2	Digestion and clarification	255
3.3.1	External structure of the sugarcane plant	225	5.1.2.3	Sucrose by polarimetry	256
3.3.2	Vegetative propagation	228	5.1.2.4	Alternative sucrose determination methods	256
3.4	Sugarcane quality evaluation	230	5.1.2.5	Determination of nonsugars	257
4	Beet and cane harvesting	239	5.1.2.6	Reproducibility of analyses in automatic beet laboratories	259
4.1	Sugarbeet harvesting	239	5.2	Determination of cane payment parameters	260
4.1.1	Harvesting operations	239	5.2.1	Sampling	260
4.1.2	Topping and lifting quality	240	5.2.1.1	Core sampling	260
4.1.3	Area capacity of harvesting systems	241	5.2.1.2	Grab sampling	260
4.1.4	Harvesting and utilization of leaves and tops	242	5.2.1.3	Full width hatch sampler	261
4.1.5	Soil content	242	5.2.1.4	Comparison of core, grab, and hatch samplers	261
4.1.6	Beet storage in field clamps	243	5.2.1.5	First expressed juice	263
4.1.7	Transport to the factory	244	5.2.1.6	Sampling of mixed juice and final bagasse	263
4.2	Cane harvesting	245	5.2.2	Determination of sucrose content (single polarization)	264
			5.2.2.1	Wet desintegrator method	264
			5.2.2.2	Hydraulic press method	264
			5.2.2.3	Analysis of first expressed juice	265
			5.2.2.4	Analysis of mixed juice and final bagasse	266
			5.3	Beet unloading	266
			5.4	Sugarbeet storage	267

5.4.1	Chemical and biochemical reactions during storage	268	5.5.6.1	Recovery of beet particulate matter	301
5.4.1.1	Biochemical reactions of respiration	268	5.5.6.2	Recovery of vegetable matter	302
5.4.1.2	Microbiology of beet in storage	269	5.5.7	Processing and disposal of beet soil	303
5.4.2	Factors affecting the technological value of beet during storage	270	5.5.7.1	Spreading by spraying	303
5.4.2.1	Temperature	270	5.5.7.2	Dewatering of beet soil	303
5.4.2.2	CO ₂ and O ₂ contents of the surrounding air	271	5.5.7.3	Composition of beet soil	303
5.4.2.3	Relative humidity	272	5.5.7.4	Possible utilization	305
5.4.2.4	Beet quality after harvesting	272	6	Extraction	309
5.4.3	Changes in the chemical composition of beet	275	6.1	Extraction theory	309
5.4.3.1	Sugar losses	275	6.1.1	Introduction	310
5.4.3.2	Soluble carbohydrates	276	6.1.2	Simplified model of countercurrent extraction	311
5.4.3.3	Soluble non-carbohydrates	278	6.1.2.1	Effect of cossette geometry	312
5.4.3.4	Insoluble substances, marc	279	6.1.2.2	Balance calculations	313
5.4.4	Physical changes of beet in storage	279	6.1.2.3	Separation stages and transfer units	314
5.4.5	Storage conditions for minimal sugar losses by respiration	280	6.1.2.4	<i>Silin</i> formula	315
5.4.6	Beet storage methods and conditions	281	6.1.2.5	Effect of axial dispersion	315
5.4.6.1	Short-term storage at the factory	282	6.1.2.6	Radial dispersion	318
5.4.6.2	Clamp storage (Europe)	282	6.1.3	Nature of the material transport within the cossette	318
5.4.6.3	Long-term storage	284	6.1.3.1	Denaturation	318
5.4.7	Inhibition of infections with chemicals	287	6.1.3.2	Release of nonsugar substances	319
5.4.8	Preserving beet by desiccation	289	6.1.3.3	Change in volume	321
5.5	Beet preparation processes	289	6.1.3.4	Diffusive material transport in the beet tissue	321
5.5.1	Losses of beet mass and sugar	290	6.1.4	Cossette geometry, dimension and size distribution	323
5.5.2	Transport of beet from storage/ reception point to washing plant	292	6.1.5	Hydrodynamic effect on material transport	325
5.5.2.1	Hydraulic transport	292	6.1.6	Complex modelling of technical extraction systems	326
5.5.2.2	Dry beet transport	293	6.1.6.1	Continuous countercurrent extraction	326
5.5.3	Washing systems	295	6.1.6.2	Stepwise countercurrent extraction	327
5.5.4	Equipment for washing systems	296	6.1.6.3	Effect of press water return	327
5.5.4.1	Beet washers	296	6.1.7	Sugarcane diffusion	327
5.5.4.2	Stone separators	297	6.2	Technical extraction of beet	328
5.5.4.3	Trash separators	298	6.2.1	Production of cossettes	328
5.5.4.4	Water separators	299	6.2.1.1	Evaluation of the quality of cossettes	328
5.5.5	Mechanical purification of transport and wash water	299	6.2.1.2	Slicing machines	329
5.5.5.1	Removal of fine organic material by vibrating screens	299	6.2.1.3	Knives	332
5.5.5.2	Soil separation	300			
5.5.6	Treatment of separated vegetable and beet particulate matter	301			

6.2.1.4	Knife consumption	334	6.3.2	Cane preparation (comminution)	358
6.2.1.5	Ventilation of slicing machine operating position	334	6.3.2.1	Measurement of fineness	358
6.2.2	Process parameters of extraction	334	6.3.2.2	Description of heavy-duty shredders	358
6.2.2.1	Process conditions	334	6.3.2.3	Mechanics of the swing hammer shredder	359
6.2.2.2	Extraction water	336	6.3.2.4	Specific energy consumption for shredding	360
6.2.2.3	Presence of oxygen during extraction	337	6.3.3	Cane mills	360
6.2.2.4	Extractor operation with deteriorated beet	337	6.3.3.1	Crushing trains	360
6.2.3	Theoretical mass balance of the extraction	338	6.3.3.2	Feeding of mills	361
6.2.4	Energy aspects	339	6.3.3.3	Roll speed required for feeding	363
6.2.5	Equipment for cell denaturation and the cooling of raw juice	339	6.3.3.4	Feed and delivery pressures	364
6.2.5.1	Scalders without heat recovery	340	6.3.3.5	Chutes for cane and bagasse mills	365
6.2.5.2	Juice/cossette heat exchangers with short and controlled retention times	340	6.3.3.6	Pressure system between the rolls	366
6.2.5.3	Exchanger-mixers of tower extractors	341	6.3.3.7	Roll load	367
6.2.6	Beet extractors	342	6.3.3.8	Roll torque and the torque-load number	368
6.2.6.1	Principles of transport in extraction equipment	342	6.3.3.9	Loads and torques in the three-roll mill	368
6.2.6.2	Controlled transport of solid phase/liquid phase	342	6.3.3.10	Mill setting estimation	370
6.2.6.3	Controlled transport of solid and uncontrolled transport of liquid phase	346	6.3.3.11	Extraction theory for mills	370
6.2.6.4	Uncontrolled transport of solid and liquid phase	346	6.3.3.12	Extraction efficiency of a single mill	371
6.2.7	Fine pulp separation and desanding	348	6.3.3.13	Extraction efficiency of a train of mills	372
6.2.8	Other extraction processes	349	6.3.3.14	Extraction efficiency – reabsorption factor	373
6.2.9	Raperie, juice station	349	6.3.3.15	Extraction efficiency – imbibition coefficient	373
6.2.10	Extraction of beet under alkaline conditions	349	6.3.4	Cane diffusers	374
6.2.10.1	History and present status	349	6.3.4.1	Plant and equipment	374
6.2.10.2	Chemical reactions during alkaline extraction	350	6.3.4.2	Factors affecting extraction efficiency	376
6.2.10.3	Process steps	350	6.3.4.3	Comparison with milling	379
6.2.10.4	Juice and pulp composition	351	6.3.5	Control of cane diffusers	381
6.2.10.5	Pulp pressing	351	6.3.6	Mass balances	383
6.2.10.6	UCB process	352			
6.2.11	Solvent extraction of dried sugarbeet cossettes	353	7	Pressed and dried pulp	389
6.3	Technical extraction of sugar from cane	354	7.1	Mechanical dewatering	390
6.3.1	Cane unloading	357	7.1.1	Effect of the extractor operation	391
			7.1.2	Application of pressing aids in extraction	391
			7.1.3	Special procedures to improve pressing properties	393
			7.1.4	Pulp presses	393

7.1.5	Operating mode of pulp presses and pulp press installations	397	7.4.2	Storage and transport	429
7.1.6	Handling of pressed pulp	398	7.4.3	Safety	429
7.2	Preservation of pressed pulp by ensiling	399	7.4.4	Quality parameters	430
7.2.1	Effect of temperature on ensiling	399	7.5	Uses of beet pulp	430
7.2.2	Effect of dry substance content on ensiling	400	7.5.1	Animal Feed Legislation	432
7.2.3	Addition of ensiling aids to pressed pulp	400	7.5.1.1	European Union	432
7.2.4	Addition of molasses and molasses-mineral-urea mixtures	402	7.5.1.2	USA and Japan	435
7.3	Thermal dewatering	402	7.5.2	Analysis and feeding values	436
7.3.1	Properties of pulp as a drying medium	402	7.5.3	Feeding of sugarbeet pulp	438
7.3.1.1	Mass and thermal balance of pulp drying	402	7.6	Fiber products for human consumption from beet and cane	443
7.3.1.2	Sorption isotherms of pressed pulp	403	7.6.1	Fiber as an ingredient of human diet	443
7.3.1.3	Drying kinetics	404	7.6.2	Beet fiber	444
7.3.2	High temperature drying	405	7.6.3	Cane fiber	445
7.3.2.1	Production of hot gas	406	8	Utilization of bagasse	451
7.3.2.2	Drying devices	406	8.1	Composition and physical characteristics of bagasse	451
7.3.2.3	Additions to the pulp before drying	407	8.1.1	Physical characteristics	454
7.3.2.4	Composition of exhaust gas and its purification	407	8.2	Burning or calorific value of bagasse	455
7.3.2.5	Energy calculations	409	8.3	Bagasse handling and storage	456
7.3.2.6	Possibilities for energy savings	411	8.4	Bagasse depithing	457
7.3.3	Low temperature drying	412	8.5	Bagasse drying	459
7.3.4	Drying using superheated steam	414	8.6	Bagasse combustion	461
7.3.4.1	Energy aspects	414	8.6.1	Principles of bagasse burning	462
7.3.4.2	Types of driers used	416	8.6.2	Thermal efficiency of bagasse burning	463
7.3.5	Drying with solar and wind energy	418	8.6.3	Burning of bagasse residues	464
7.3.5.1	Climatic requirements	419	8.6.4	Furnaces of bagasse-fired steam boilers	465
7.3.5.2	Economics of solar versus high temperature drying	419	8.6.5	Fly ash separation from bagasse-fired steam boiler flue gas	470
7.3.5.3	Construction of solar drying surface	419	8.7	Utilization of bagasse other as a fuel	471
7.3.5.4	Drying process	420	8.7.1	Pentosans	471
7.3.6	Process control for pulp driers	420	8.7.2	Fibrous products from bagasse	473
7.3.6.1	Measurement devices	421	8.7.3	Bagasse as a raw material in agronomy and husbandry	474
7.3.6.2	Control strategy	421	8.7.3.1	Bagasse in husbandry	474
7.4	Pulp pelleting	424	8.7.3.2	Bagasse as a substrate for the production of edible mushrooms	475
7.4.1	Pelleting plant	424	8.7.3.3	Composting of bagasse	475
7.4.1.1	Conditioning and molassing	424	8.8	Health hazards in bagasse handling – bagassosis	477
7.4.1.2	Pelleting press	425			
7.4.1.3	Cooling/drying	427			

9	Juice purification	479	9.2.2	Processes with limited invert sugar degradation	507
9.1	Chemical and physical properties	479	9.2.2.1	Beet sugar	507
9.1.1	Solubilities and dissociation equilibria	480	9.2.2.2	Processes in cane sugar manufacture	509
9.1.1.1	Solubility of calcium hydroxide in pure and technical sugar solutions	481	9.2.3	Special processing steps in beet juice purification	511
9.1.1.2	Solubility of calcium carbonate and other calcium salts	481	9.2.3.1	Removal of the precipitate after preliming	511
9.1.1.3	Solubility of carbon dioxide and dissociation of carbonic acid	483	9.2.3.2	Dry liming	511
9.1.1.4	Dissociation of ammonia	484	9.2.3.3	MZ method	512
9.1.2	Chemical reactions and process steps of the lime/carbonic acid juice purification	484	9.2.3.4	Juice purification methods for deteriorated beet	512
9.1.3	Cation/anion balances in juice purification	486	9.2.4	Sulfitation	513
9.1.4	Sodium, magnesium or phosphate ion addition for decalcification	488	9.2.4.1	Sulfitation in beet sugar manufacture	513
9.1.5	Natural, effective and optimal alkalinity	490	9.2.4.2	Sulfitation in cane sugar manufacture	514
9.1.6	Precipitation of nonsugars by addition of lime	491	9.2.4.3	Security filtration	514
9.1.7	Optimum flocculation point in preliming and first carbonation	492	9.2.4.4	White sugar production without sulfitation	514
9.1.8	Overcarbonation	493	9.2.4.5	Sulfite reaction with nitrite	514
9.1.9	Minimizing of CaO consumption	494	9.2.5	Purification of thick juice and syrups	515
9.1.10	Filtration and sedimentation	495	9.2.5.1	Phosphate purification of syrups	515
9.1.10.1	Filtration – theoretical background	495	9.2.5.2	Talodura thick juice purification	515
9.1.10.2	Sedimentation – theoretical background	497	9.2.5.3	Talofloc process	515
9.1.10.3	Methods for the determination of filtrability	498	9.2.5.4	Sulfitation and carbonation processes for refined sugar manufacture	516
9.1.10.4	Determination of residual slurry in the filtrate	499	9.2.5.5	Guangdong flotation process	516
9.1.10.5	Method for determination of sedimentation rate	499	9.2.5.6	New magnesia clarifying process for refineries	516
9.1.10.6	Determination of sugar in the carbonation lime	500	9.2.5.7	Ozonization for removal of color, etc.	516
9.2	Juice purification systems	500	9.2.5.8	Use of activated carbon	516
9.2.1	Processes with alkaline invert sugar degradation	500	9.2.6	Softening of juice by ion exchangers	517
9.2.1.1	Traditional batch process	500	9.2.6.1	Classical decalcification	517
9.2.1.2	Traditional process with continuous preliming	503	9.2.6.2	N.R.S. (New Regenerant Solution) process	518
9.2.1.3	Continuous systems with a clarifier	504	9.2.6.3	Gryllus process	519

24.1.2.2	Phase 2 – Systematic improvement	1032	26.3	Processing costs	1074
24.1.2.3	Phase 3 – Innovation and enterprise	1033	26.3.1	Processing costs in general	1074
24.2	On-line control of critical activities	1035	26.3.2	Capital costs	1075
24.2.1	Identifying critical parameters	1035	26.3.3	Labor costs	1076
24.2.2	Sampling	1035	26.3.4	Fuel costs	1076
24.2.3	Statistical process control	1038	26.3.5	Limestone and coke costs	1077
24.2.4	Weight control of finished products	1042	26.3.6	Costs of processing aids	1077
24.3	Hygiene management	1044	26.3.7	Maintenance costs	1077
24.3.1	People	1045	26.3.8	Beet sugar production costs	1078
24.3.2	Premises and equipment	1045	26.3.9	Cane sugar production costs	1078
24.3.3	Production	1046	26.3.10	Outlook	1078
24.3.4	Performance measurement and control	1047	26.4	Number of sugar factories in the world, world production	1081
24.4	Processing aids	1049	26.5	Capital costs of sugar factories	1082
24.5	Environmental audit	1050	27	Glossary of technical terms	1084
24.6	Industrial safety	1051	28	Books and journals relating to sugar manufacture	1092
