1.5 Quality criteria of white sugar and its commercial grades 84

1.5.1 Limiting values in international standards 84

1.5.1.1 Codex Alimentarius 84

1.5.1.2 EU sugar standards 86

1.5.1.3 Standards of the EU sugar market regime 87

1.5.1.4 US Food Chemical Codex 88

1.5.1.5 Other standards and guidelines 89

1.5.2 Individual criteria in international standards 90

1.5.2.1 Sucrose 90

1.5.2.2 Invert sugar 90

1.5.2.3 Ash and conductivity 91

1.5.2.4 Water 91

1.5.2.5 Color and turbidity of the solution 93

1.5.2.6 Visual appearance (color type) 95

1.5.2.7 Sulfur dioxide 95

1.5.2.8 Contaminants 96

1.5.2.9 Raffinose and theanderose in white sugar 97

1.5.3 International Pharmacopoeia 97

1.5.3.1 European Pharmacopoeia 97

1.5.3.2 United States Pharmacopoeia 98

1.5.4 Specific criteria 98

1.5.4.1 Microbiological criteria and standards 98

1.5.4.2 Physical and chemical criteria 98

2 Composition of sugarbeet and sugarcane and chemical behavior of constituents in processing 115

2.1 Composition of sugarbeet 115

2.1.1 Overview 115

2.1.2 Relative distribution of beet constituents 115

2.1.3 Composition of the cell wall 117

2.1.3.1 Marc, marc hydrate, and juice content 117

2.1.3.2 Composition of the marc and properties of marc components 118

2.1.3.2.1 Cellulose 118

2.1.3.2.2 Pectic substances 119

2.1.3.2.3 Hemicelluloses 122

2.1.4 Composition of cell juice 123

2.1.4.1 Nitrogen-free compounds 123

2.1.4.1.1 Monosaccharides 123

2.1.4.1.2 Oligosaccharides 126

2.1.4.1.3 Polysaccharides 128

2.1.4.1.4 Organic and inorganic anions 129

2.1.4.1.5 Inorganic cations and ash 133

2.1.4.1.6 Saponins 135

2.1.4.1.7 Lipids 137

2.1.4.1.8 Odor substances 137

2.1.4.1.9 Phenolic compounds 150

2.1.4.2 Nitrogenous compounds 138

2.1.4.2.1 Overview 138

2.1.4.2.2 Amino acids and amides 140

2.1.4.2.3 Proteinaceous substances 144

2.1.4.2.4 Plant bases and lecithin 146

2.1.4.2.5 Nucleic acids, pyrimidine and purine bases, allantoin 148

2.1.4.2.6 Phenolic compounds 150

2.1.4.2.7 Vitamins 151

2.1.4.2.8 Composition of sugarcane fiber and bagasse 151

2.1.4.2.9 Composition of sugarcane juice constituents 152

2.1.4.2.10 Reactions of beet cell-wall constituents 157

2.1.4.2.11 During storage 157

2.1.4.2.12 During extraction 158

2.1.4.2.13 During ensiling of pressed pulp 161

2.1.4.2.14 Chemical reaction of fine pulp in juice purification 162

2.1.4.2.15 Reactions of juice constituents 163

2.1.4.2.16 Saccharides 163

2.1.4.2.17 Glucose, fructose (invert sugar) degradation 170

2.1.4.2.18 Further saccharides 177

2.1.4.2.19 Nonsugars 179

2.1.4.2.20 Organic N-free acids 179

2.1.4.2.21 Amino acids 181

2.1.4.2.22 Glutamine degradation 183

2.1.4.2.23 Other nitrogenous substances 185

2.1.4.2.24 Phenolic compounds 186

2.1.4.2.25 Other constituents 186

2.1.4.2.26 Protein, nucleic acids and nucleic building blocks 187

2.1.4.2.27 Inorganic anions 188
2.4.2.9 Inorganic cations 189
2.4.3 Color formation 189
2.4.3.1 Melanin formation 189
2.4.3.2 Melanoidin formation (Maillard reaction) 192
2.4.3.3 Caramelization 197
2.4.3.4 Strecker degradation 199
2.4.3.5 Inhibitors 200

3 Quality of sugarbeet and sugarcane 209
3.1 Morphology and physical properties of sugarbeet 209
3.1.1 Morphology 209
3.1.2 Ultrastructure of the native sugarbeet root 211
3.1.3 Physical properties of beet 212
3.1.4 Physical data of sugarbeet piles 214
3.1.5 Physical properties of beet after denaturation 215
3.2 Formulas to calculate sugar losses in molasses, nonsugar content in thick juice and resulting pH value (alkalinity) of thick juice from beet analysis 216
3.3 Structure, propagation and physiology of the sugarcane plant 225
3.3.1 External structure of the sugarcane plant 225
3.3.2 Vegetative propagation 228
3.4 Sugarcane quality evaluation 230

4 Beet and cane harvesting 239
4.1 Sugarbeet harvesting 239
4.1.1 Harvesting operations 239
4.1.2 Topping and lifting quality 240
4.1.3 Area capacity of harvesting systems 241
4.1.4 Harvesting and utilization of leaves and tops 242
4.1.5 Soil content 242
4.1.6 Beet storage in field clamps 243
4.1.7 Transport to the factory 244
4.2 Cane harvesting 245
4.2.1 Implementing a mechanized harvesting system 245
4.2.2 Fully mechanized whole-stick harvesting systems 245
4.2.3 Chopper harvesting systems 246
4.2.4 Choice between chopper and whole-stick harvester 246
4.3 Cane transport 248
4.4.1 Cane loading 248
4.4.2 Soil compaction 249

5 Reception, storage and washing 251
5.1 Determination of beet payment parameters 251
5.1.1 Weighing and sampling 251
5.1.2 Sampling 253
5.1.3 Top and soil tare determination 253
5.1.4 Analysis 254
5.1.5 Brei preparation 254
5.1.6 Digestion and clarification 255
5.1.7 Sucrose by polarimetry 256
5.1.8 Alternative sucrose determination methods 256
5.1.9 Determination of nonsugars 257
5.1.10 Reproducibility of analyses in automatic beet laboratories 259
5.1.11 Determination of cane payment parameters 260
5.1.12 Weighing 260
5.1.13 Core sampling 260
5.1.14 Full width hatch sampler 261
5.1.15 Comparison of core, grab, and hatch samplers 261
5.1.16 First expressed juice 263
5.2 Determination of cane sucrose content (single polarization) 264
5.2.1 Wet desintegrator method 264
5.2.2 Hydraulic press method 264
5.2.3 Analysis of first expressed juice 265
5.2.4 Analysis of mixed juice and final bagasse 266
5.2.5 Beets unloading 266
5.2.6 Sugarbeet storage 267
5.4 Chemical and biochemical
5.4.1.1 Biochemical reactions of respiration 268
5.4.1.2 Microbiology of beet in storage 269
5.4.2 Factors affecting the technological value of beet during storage 270
5.4.2.1 Temperature 270
5.4.2.2 CO₂ and O₂ contents of the surrounding air 271
5.4.2.3 Relative humidity 272
5.4.2.4 Beet quality after harvesting 272
5.4.3 Changes in the chemical composition of beet 275
5.4.3.1 Sugar losses 275
5.4.3.2 Soluble carbohydrates 276
5.4.3.3 Soluble non-carbohydrates 278
5.4.3.4 Insoluble substances, marc 279
5.4.4 Physical changes of beet in storage 279
5.4.5 Storage conditions for minimal sugar losses by respiration 280
5.4.6 Beet storage methods and conditions 281
5.4.6.1 Short-term storage at the factory 282
5.4.6.2 Clamp storage (Europe) 282
5.4.6.3 Long-term storage 284
5.4.7 Inhibition of infections with chemicals 287
5.5 Beet preparation processes 290
5.5.1 Losses of beet mass and sugar 290
5.5.2 Transport of beet from storage/reception point to washing plant 292
5.5.2.1 Hydraulic transport 292
5.5.2.2 Dry beet transport 293
5.5.3 Washing systems 295
5.5.4 Equipment for washing systems 296
5.5.4.1 Beet washers 296
5.5.4.2 Stone separators 297
5.5.4.3 Trash separators 298
5.5.4.4 Water separators 299
5.5.5 Mechanical purification of transport and wash water 299
5.5.5.1 Removal of fine organic material by vibrating screens 299
5.5.5.2 Soil separation 300
5.5.6 Treatment of separated vegetable and beet particulate matter 301
5.5.6.1 Recovery of beet particulate matter 301
5.5.6.2 Recovery of vegetable matter 302
6.1 Extraction theory 309
6.1.1 Introduction 310
6.1.2 Simplified model of countercurrent extraction 311
6.1.3.1 Denaturation 318
6.1.4 Cossette geometry, dimension and size distribution 323
6.1.5 Hydrodynamic effect on material transport 325
6.1.6 Complex modelling of technical extraction systems 326
6.1.7 Sugarcane diffusion 327
6.2 Technical extraction of beet 328
6.2.1 Production of cossettes 328
6.2.2 Stepwise countercurrent extraction 326
6.2.3 Slicing machines 329
6.2.4 Knives 332
6.3 Knife consumption 334
6.2.1.5 Ventilation of slicing machine operating position

6.2.2 Process parameters of extraction
6.2.2.1 Process conditions
6.2.2.2 Extraction water
6.2.2.3 Presence of oxygen during extraction
6.2.2.4 Extractor operation with deteriorated beet

6.2.3 Theoretical mass balance of the extraction
6.2.4 Energy aspects
6.2.5 Equipment for cell denaturation and the cooling of raw juice
6.2.5.1 Scalders without heat recovery
6.2.5.2 Juice/cossette heat exchangers with short and controlled retention times
6.2.5.3 Exchanger-mixers of tower extractors
6.2.6 Beet extractors
6.2.6.1 Principles of transport in extraction equipment
6.2.6.2 Controlled transport of solid phase/liquid phase
6.2.6.3 Controlled transport of solid and uncontrolled transport of liquid phase
6.2.6.4 Uncontrolled transport of solid and liquid phase
6.2.7 Fine pulp separation and desanding
6.2.8 Other extraction processes
6.2.9 Raperie, juice station
6.2.10 Extraction of beet under alkaline conditions
6.2.10.1 History and present status
6.2.10.2 Chemical reactions during alkaline extraction
6.2.10.3 Process steps
6.2.10.4 Juice and pulp composition
6.2.10.5 Pulp pressing
6.2.10.6 UCB process
6.2.11 Solvent extraction of dried sugarbeet cossettes
6.3 Technical extraction of sugar from cane
6.3.1 Cane unloading
6.3.2 Cane preparation (comminution)

6.3.1.5 Measurement of fineness
6.3.2.1 Description of heavy-duty shredders
6.3.2.2 Mechanics of the swing hammer shredder
6.3.2.3 Specific energy consumption for shredding
6.3.3 Cane mills
6.3.3.1 Crushing trains
6.3.3.2 Feeding of mills
6.3.3.3 Roll speed required for feeding
6.3.3.4 Feed and delivery pressures
6.3.3.5 Chutes for cane and bagasse mills
6.3.3.6 Pressure system between the rolls
6.3.3.7 Roll load
6.3.3.8 Roll torque and the torque-load number
6.3.3.9 Loads and torques in the three-roll mill
6.3.3.10 Mill setting estimation
6.3.3.11 Extraction theory for mills
6.3.3.12 Extraction efficiency of a single mill
6.3.3.13 Extraction efficiency of a train of mills
6.3.3.14 Extraction efficiency – reabsorption factor
6.3.3.15 Extraction efficiency – imbibition coefficient
6.3.4 Cane diffusers
6.3.4.1 Plant and equipment
6.3.4.2 Factors affecting extraction efficiency
6.3.4.3 Comparison with milling
6.3.4.4 Control of cane diffusers
6.3.5 Mass balances

7 Pressed and dried pulp
7.1 Mechanical dewatering
7.1.1 Effect of the extractor operation
7.1.2 Application of pressing aids in extraction
7.1.3 Special procedures to improve pressing properties
7.1.4 Pulp presses
7.1.5 Operating mode of pulp presses
Contents

7.1.6 Handling of pressed pulp 397 7.4.3 Safety 429
7.2 Preservation of pressed pulp by ensiling 398 7.4.4 Quality parameters 430
7.2.1 Effect of temperature on ensiling 399 7.5 Uses of beet pulp 430
7.2.2 Effect of dry substance content on ensiling 400 7.5.1 Animal Feed pulp 430
7.2.3 Addition of ensiling aids to pressed pulp 400 7.5.1.1 European Union 432
7.2.4 Addition of molasses and molasses-mineral-urea mixtures 402 7.5.1.2 USA and Japan 435
7.3 Thermal dewatering 402 7.6.1 Fiber as an ingredient of human diet 443
7.3.1 Properties of pulp as a drying medium 402 7.6.2 Beet fiber 444
7.3.1.1 Mass and thermal balance of pulp drying 403 7.6.3 Cane fiber 445
7.3.1.2 Sorption isotherms of pressed pulp 404
7.3.1.3 Drying kinetics 405 8 Utilization of bagasse 451
7.3.2 High temperature drying 406 Composition and physical characteristics of bagasse 451
7.3.2.1 Production of hot gas 406 Physical characteristics 454
7.3.2.2 Drying devices 406 8.1 Burning or calorific value of bagasse 455
7.3.2.3 Additions to the pulp before drying 407 Bagasse handling and storage 456
7.3.2.4 Composition of exhaust gas and its purification 407 Bagasse depithing 457
7.3.2.5 Energy calculations 409 8.2 Bagasse drying 459
7.3.2.6 Possibilities for energy savings 411 8.3 Bagasse combustion 461
7.3.3 Low temperature drying 412 8.4 Principles of bagasse burning 462
7.3.4 Drying using superheated steam 414 8.5 Thermal efficiency of bagasse burning 463
7.3.4.1 Energy aspects 414 Burning of bagasse residues 464
7.3.4.2 Types of driers used 416 8.6.1 Furnaces of bagasse-fired steam boilers 465
7.3.5 Drying with solar and wind energy 418 Fly ash separation from bagasse-fired steam boiler flue gas 470
7.3.5.1 Climatic requirements 419 8.6.5 Utilization of bagasse other as a fuel 471
7.3.5.2 Economics of solar versus high temperature drying 419 8.7 Pentosans 471
7.3.5.3 Construction of solar drying surface 419 8.7.1 Fibrous products from bagasse 473
7.3.5.4 Drying process 420 8.7.3 Bagasse as a raw material in agronomy and husbandry 474
7.3.6 Process control for pulp driers 420 8.7.3.1 Bagasse in husbandry 474
7.3.6.1 Measurement devices 421 8.7.3.2 Bagasse as a substrate for the production of edible mushrooms 475
7.3.6.2 Control strategy 421 8.7.3.3 Composting of bagasse 475
7.4 Pulp pelleting 424 8.8 Health hazards in bagasse handling – bagassosis 477
7.4.1 Pelleting plant 424
7.4.1.1 Conditioning and molassing 424
7.4.1.2 Pelleting press 425
7.4.1.3 Cooling/drying 427
7.4.2 Storage and transport 429
8.7.3.3 Utilization of bagasse other as a fuel 471
8.7.3.3 Pentosans 471
8.7.3.3 Fibrous products from bagasse 473
8.7.3.3 Bagasse as a raw material in agronomy and husbandry 474
8.7.3.3 Bagasse in husbandry 474
8.7.3.3 Bagasse as a substrate for the production of edible mushrooms 475
8.7.3.3 Composting of bagasse 475
8.7.3.3 Health hazards in bagasse handling – bagassosis 477
8.7.3.3 Juice purification 479
8.6.1 Furnaces of bagasse-fired steam boilers 465
8.6.5 Fly ash separation from bagasse-fired steam boiler flue gas 470
8.6.5 Utilization of bagasse other as a fuel 471
8.6.5 Pentosans 471
8.6.5 Fibrous products from bagasse 473
8.6.5 Bagasse as a raw material in agronomy and husbandry 474
8.6.5 Bagasse in husbandry 474
8.6.5 Bagasse as a substrate for the production of edible mushrooms 475
8.6.5 Composting of bagasse 475
